Work from home

There are different ways to access Hemsö's Remote Desktop and remote applications from your private computer or Apple/Android device.
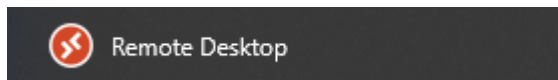

Work from home via private device

You can either boot the remote desktop or applications directly from the web, or from an installed client that publishes this to your computer's start menu. You can also download the client to your Apple/Android device *(not the web)*.

To download the client visit the address below:
<ins>(The different operating systems are listed individually).</ins>

http://hemso.se/it

When it is finished installed, you will find it in the start menu or as an installed App in your device.
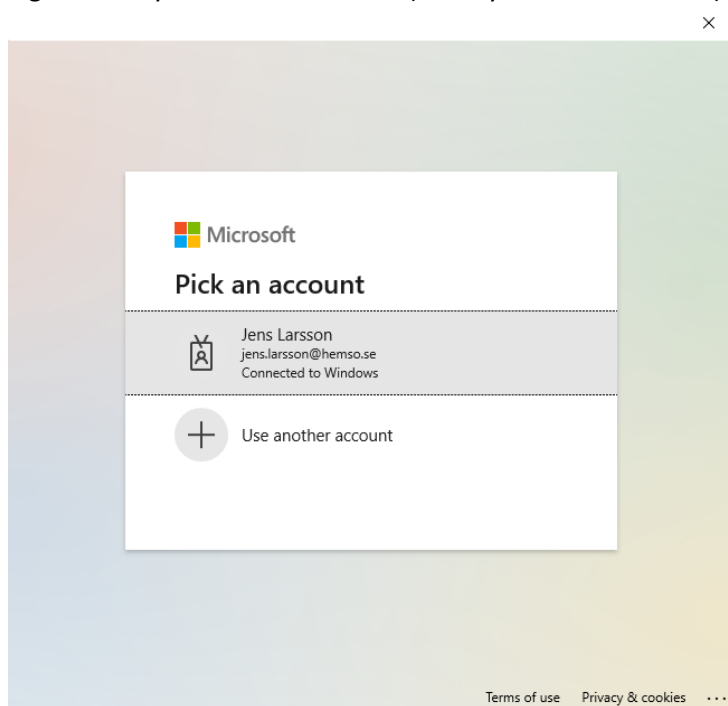

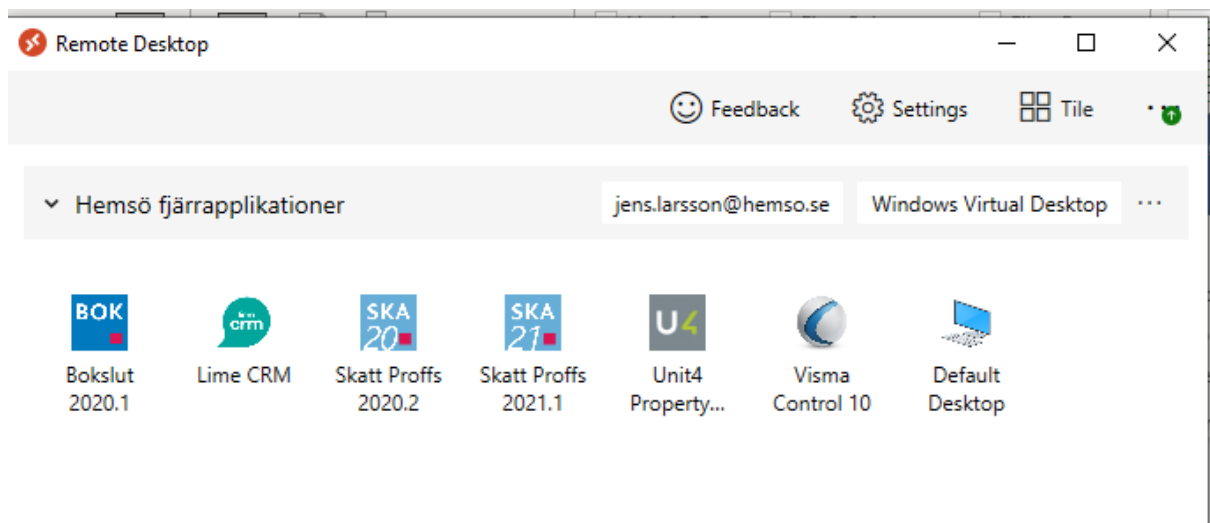

Windows COMPUTER

The first time you start the program. Click the "Subscribe" button

Sign in with your Hemsö Account (Enter your email address)

Once logged in, you get the Hemsö applications that are included as remote applications.

These are also available in your start menu under the Hemsö Remote Applications folder

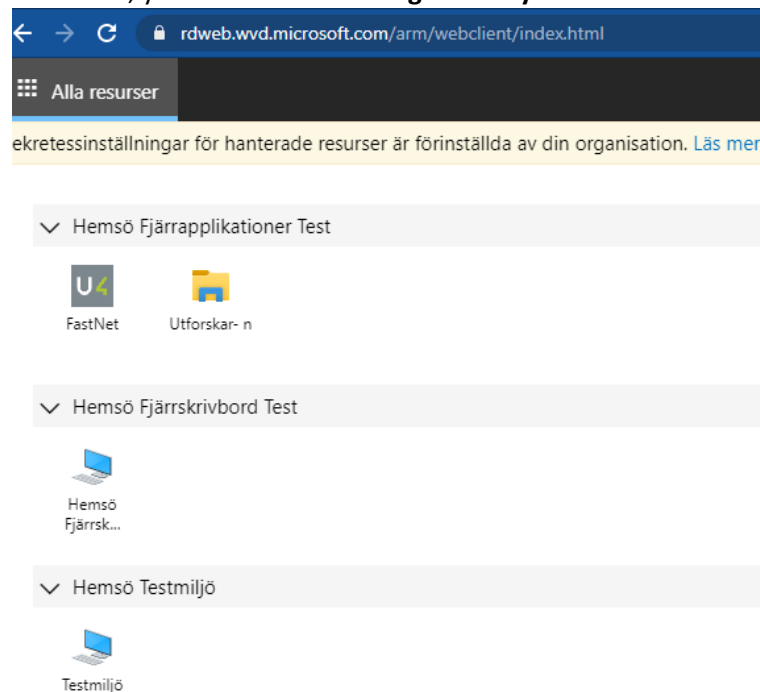

Web portal

You can access your Remote Desktop and Remote Applications directly through the web portal as well.

https://rdweb.wvd.microsoft.com/arm/webclient

After that, you will be asked to **log in with your Hemsö credentials.**

Now you can boot up Remote Desktop or just an Application directly from the browser!
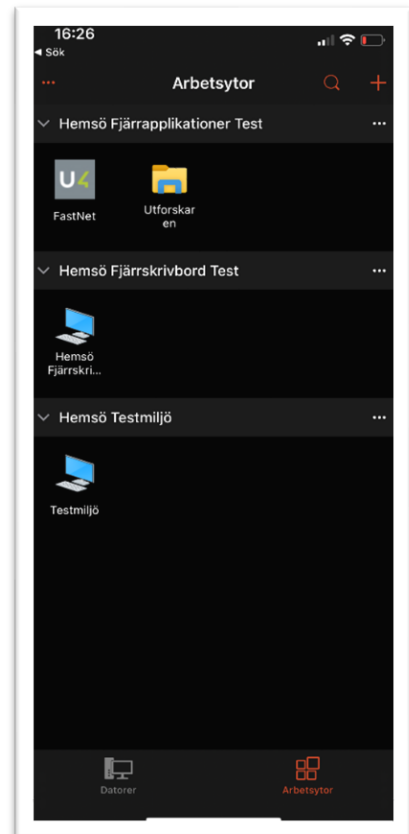

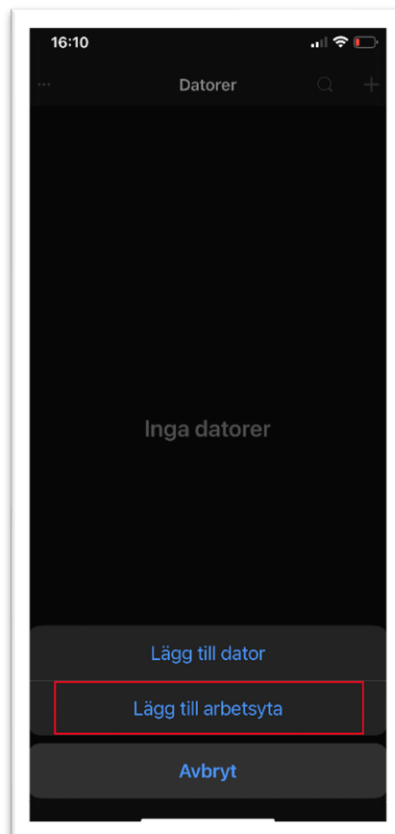

iPhone/iPad

After downloading RD Client via Appstore

Click **the Plus sign (+)**

Add workspace.

Enter your Hemsö
address. Click Next.

After that, programs

and remote desktops
come up.

Done!

Apple PC

After downloading the Microsoft Remote Desktop client

Start the Program

Click **the Plus sign (+)**
Select Workspace.

There you then type your **Hemsö address.**
Then **Subscribe.**

You will then be asked to log in with your Hemsö password.

Android

After the client is downloaded, start the application. Then click the
Plus sign (+) in the right corner and select **Workspaces/Remote Resources**.

Then enter your Hemsö address. You will then be asked to log in with your Hemsö credentials.

Now the remote desktop and other apps should be visible.

Done!
